

6 Ways to Get the Most from IT Strategic Plans

IT Strategic Plans are the vehicle used to ensure that the organization is leveraging technology and technology-enabled services, to create value for the organization, stakeholders, customers, and partners.

Security Assessment

Gap assessment of current state of Information Protection program with plan to close gaps

Operations Assessment

Assess IT operating model and performance and develop plan to close gaps and improve performance

Infrastructure Assessment

Assess current state infrastructure and identify opportunities for savings and improved performance including leveraging cloud services

IT Operations Assessment

Assess IT value and performance from a business perspective; how well it meets business needs and objectives

Business Alignment Assessment

Assess how well the IT plan aligns with business objectives and strategies

Vendor Assessment

Risk assessment of a SaaS vendor: high-level review of third-party technologies, using a security scanner to identify vulnerabilities
